

Korea Int'l Cooperation Conference
on Oceans and Fisheries

“Seeking ways forward to
cooperate between Korea and
Africa in oceans and fisheries”

Seoul, Korea, November. 17
Korea Chamber of Commerce and Industry
Council Chamber

Korea has been building a closer relationship with African countries in ocean governance and sustainable fisheries sector, which remains crucial for global food security and economic growth in the region. Korea's ODA amount in the world ocean sector has also sharply grown from 5 billion won (KRW) in 2011 to 8.6 billion won in 2014. While many cooperation projects are implemented on the basis of own development experiences, Korea is seeking ways to enhance its effectiveness and efficiency. In this context, this conference invites key policymakers in Africa to present their actual needs for cooperation, and Korean experts to review its policy directions in expanding collaborative partnerships. This conference will serve as the foundation for enhancing mutual understandings through information exchange, and further explore the future directions in deepening cooperation between the two regions.

Please join us in this meaningful discussion.

Thank you.
